E1D21	Prime Nutrisource INC	As a recognized world leader in catalysis, we're working hard to build strategic partnerships with customers in pharmaceutical and fine chemical industries, committing to provide customers with the best technology for optimizing catalytic processes.	For over one year Johnson Matthey has been granted a global license to the full range of Buchwald bulky and electron rich dialkyl- biaryl- mono phosphine and related bis-phosphine ligands. The licensed patents include both the composition of matter of the family of ligands and the processes for use of catalysts containing these ligands in transition metal catalyzed carbon-heteroatom and carbon-carbon bond forming reactions. The combination of these phosphine ligands such as X-Phos, S-Phos, Ru-Phos or Brett-Phos, with one of a number of palladium catalyst precursors has proven to be a convenient process for the in situ generation of active catalysts.
