## EMULSIFIED INACTIVATED VACCINE AGAINST NEWCASTLE DISEASE

### COMPOSITION :

Each dose of 0.5 ml of vaccine contains: Inactivated Newcastle Disease virus : 50 PD<sub>50</sub> in oil emulsion

### INDICATIONS :

Active immunization against Newcastle Disease.

### DOSAGE AND ADMINISTRATION :

Inject subcutaneously (at the back of the neck) or intramuscularly (pectoral muscles) in breeders and hens. First vaccination at about 28 days of age; booster at 18 weeks, before the laying period. A first vaccination with live vaccine against Newcastle Disease is recommended.

### WARNINGS :

- ☛ Let the vaccine reach the room temperature (+20°C) before use
- ☛ Shake well before and during use
- ☛ Only healthy birds should be vaccinated
- ☛ Accidental injection of this vaccine into the vaccinator can cause serious localized reaction for which expert medical advice should be sought at once, informing the doctor that the vaccine is an oil emulsion

### STORAGE :

Store at +2/+8°C. Do not freeze.

### EXPIRY TIME :

2 years.

### PACKING :

Box containing 10 bottles of 1000 doses.
