TOTAL COW COMFORT

Composition:

The aerosol contains a special blended, ozonized vegetable oil.

Metritis:

The most important cause of fertility problems is Metritis. Up to 96% of the cows suffer from one or another form of Metritis (acute or chronic).

Economic losses:

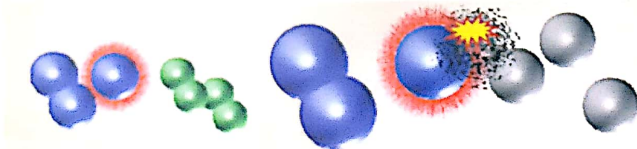

The economic losses come from lower fertility, lower milk production and the costs of veterinary treatment. The costs of Metritis are estimated at Rs. 39000/- per cow per year.

MODE OF ACTION

How does ozone work?

Ozone kills the bacteria, viruses and molds within a few seconds by a process known as **cell lysis**. Ozone ruptures the molecular cell membrane, disperses the cell's cytoplasm and makes reactivation of cell impossible.

When the bacteria are exposed to ozone they begin absorbing ozone molecules immediately. Those ozone molecules (O_3) break apart within seconds and when they do, the bacteria literally explode.

Healthy cells are left unaffected because of their protective enzyme coating and the only by product is harmless oxygen (O_2).

The benefits of ozonized vegetable oil:

are unique and very effective:

- Ozone actively destroys bacteria, viruses and molds.
- Ozone has a much higher oxidation potential.
- Ozone will cicatrize.
- Ozone leaves no residues in milk and meat.
- Ozone has no with draw period.

Indications:

Fertility problems:

- Vaginal problems, like damage of the mucosa.
- Bacterial infections
- Dermatitis between udder and leg
- Sanitizing after the extraction of a vaginal entry (PRID and CIDR)

Skin problems:

- Eczema
- Abscesses
- Healing of chapped skin, cuts and abrasions

Wounds:

- Wound healing
- Navel care

SANOFOAM has no mechanical influence on the expulsion of the placenta. The ozone in SANOFOAM plays a role in the biochemical processes that regulate the expulsion of the placenta and membranes.

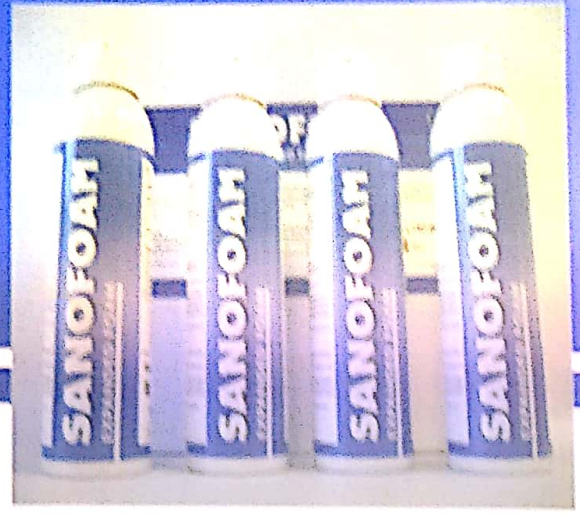

Using SANOFOAM is also recommended as an option before switching to the use of antibiotics. SANOFOAM contains active ingredients that provide a dermal support and have an **antiseptic, anti-inflammatory, soothing and healing effect**.

SANOFOAM with ozonized oil allows you to use it in difficult to reach places and can be used in cases of physiological damage to mucosal tissues.

CLEANING – CARING – CURING

Directions of use:

After calving: 5-10 sec. spray

On the navel of the calf: 2-3 sec. spray

24 hours before or after insemination: 5-10 sec. spray

Packing:

Sanofoam is packaged in aerosols with the contents of 200 ml. Equivalent of approximately 2 minutes of allocation of foam. A box contains 4 aerosols and 10 catheters.

Storage:

Keep out of reach of children.

Do not expose to temperatures over 50 °C.

Store at ambient temperature.

سانو فوم:

- سانو فوم Ozonized essential oil پر مشتمل ہے۔
- سانو فوم میں شامل Ozone، بیکیٹیریا، وائرسز اور فنجائی کو ختم کرنے کی طاقت رکھتی ہے۔
- سانو فوم کی باقیات دودھ یا گوشت میں نہیں آتیں۔
- سانو فوم کے استعمال سے یوٹرس، ویجائنا، جلد اور Navel پر ہونے والے ہر قسم کے انفیکشن کو ختم کیا جا سکتا ہے۔

طریقہ استعمال:

چھڑے کی پیدائش کے بعد 5 سے 10 سیکنڈ سپرے

چھڑے کے Navel پر 2 سے 3 سیکنڈ سپرے

Insemination کے 24 گھنٹے پہلے یا بعد میں 5 سے 10 سیکنڈ سپرے

پیکنگ:

200 ملی لیٹر سپرے

4 سپرے بوتل، 10 کیٹھیروز/چیک
