Minazin PF

Injection

Composition:

Each ml contains
Diminazine Aceturate......105mg
Antipyrine.....131mg

Characteristics:

Minazina PF Injection is the combination of diminazine aceturate, an antitrypanosomiasis and antipyrine, an analgesic and antipyretic. It provides effective control in the treament of trypanosomiasis and babesiosis along with bactericidal activitiy. Addition of antipyrine with diminazine provides analgesic and antipyretic action.

The combination is most effective and latest which has been accepted through out the world as the first choice of treatment and control of trypanosomiasis and babesiosis in the livestock industry.

Indications:

TRYPANOSOMIASIS: Is a disease, which affect all the domestic animals, caused by protozoa of the genus trypanosoma. The major species are T-congolense, T-vivax, T-brucei and T-simiae. In the order of importance, those effecting cattle, sheep and goats are T-congolense, T-vivax and T-brucei. In dogs and cats, T-brucei probably is the most important. However it is difficult to assign an order of importance for horses and camels.

in addition to Trypanocidal activity, it is babesicidal and bactericidal (mainly brucella and streptococcus species), It is also effective against Piroplasma, babesia bovis, B-bigemina, B-ovis, B-motasi, B-canis and other species like Nuttelaa equi and theileria annulata.

Antipyrine being a powerful antipyretic, analgesic and anti-inflammatory drug is used to give symptomatic relief from muscle, bone and joint lesions. It is of great value as adjuncts to primary therapy, septic or endotoxic shock describes the spectrum of changes found in and animal suffering trypanosomiasis.

Dosage and Administration:

Administer the following dose by deep intramuscular injection only.

Animal	Dose
Cow/Buffalo	10ml per 300 kg BW
Horse/Donkey	10ml per 300 kg BW
Sheep/Goat	0.3ml per 10 kg BW

In case of infestation due to Trypanosoma brucei, the dose must be doubled. In Surra, if required the dose may be repeated on third day.

Presentation:

10ml, 50ml

For Veterinary Use Only

مینازین فی الیف انجشن ٹریپنوسومی ایسزاور میبی سیوسز کے خلاف مئوژ ہتھیار

Infringing Fatal Acticities of Trypanosomiasis & Babesia

خوارک اورطریقه استعال: بذرید انجکشن گوشت میں لگایا جاسکتا ہے۔ ٹریپنوسومہ، بے بیزید، ٹرائیکوموناس اور پائرو پلازمہ انفیکشن کیلئے عمدی خیداکی:

3.5 ملی گرام(Diminazine) فی کلوگرام جسمانی وزن کیلتے یا املی لیٹر مینازین-PF فی 43 کلوگرام جسمانی وزن کیلئے

وفت ضرورت:

دوا کی مقدار دوگن کی جاستی ہے یعنی 1 ملی کیٹر ٹی 21.5 کلوگرام جسمانی وزن کیلئے صرف گائے ، بھینس، بھیٹر، اونٹ، گھوڑا اور کتوں میں استعمال کریں۔

ادوماتي احتياط:

20 دن تک گوشت اور 3 دن تک دود ھاستعال نہ کریں۔ خشنڈی اورخٹک جگہ C 28 سے کم درجہ حرارت پر رکھیں۔ روشنی سے محفوظ رکھیں۔ بچوں کی پہنچ سے دور رکھیں۔ اگر سلوشن میں کرشلز نظر آئیں تو بوتل کو نیم گرم پانی میں رکھ کر گرم کریں۔ جب تک کرشلز خل ہوجائیں۔
